

Pseudouridine / 5-ribosyluracil Rabbit mAb

Catalog NO.: A20988 **Recombinant**

Basic Information

Observed MW

Refer to figures

Calculated MW

Category

Other Modified Antibodies

Applications

DB, ELISA

Cross-Reactivity

Species independent

Clone number

ARC50719

Background

Pseudouridine (Ψ) was among the first post-transcriptional modifications discovered and is overall one of the most abundant (1) . It is present in a wide range of cellular RNAs and is highly conserved across species. Ψ is derived from uridine (U) via base-specific isomerization catalyzed by Ψ synthases. The site-specific pseudouridylation goes through either snoRNA-dependent (requires H/ACA RNP) or -independent mechanism (requires pseudouridine synthase (PUS) family enzymes) (2) . It has an extra hydrogen-bond donor at its non-Watson-Crick edge. When incorporated into RNA, Ψ can alter RNA secondary structure by increasing base stacking, improving base pairing and rigidifying sugar-phosphate backbone5. The chemical and physical properties of RNA can be altered with the incorporation of Ψ, which could contribute to subsequent cellular functions.

Recommended Dilutions

DB 1:1000 - 1:10000

ELISA

Recommended starting concentration is 1 μg/mL.
Please optimize the concentration based on your specific assay requirements.

Immunogen Information

Gene ID

CAS: 1445-07-4

Swiss Prot

Immunogen

Chemical compounds corresponding to Pseudouridine / 5-ribosyluracil.

Source

Rabbit

Isotype

IgG

Purification

Affinity purification

Storage

Store at -20°C. Avoid freeze / thaw cycles.

Buffer: PBS containing 50% glycerol and 0.05% BSA, preserved with proclin300 or sodium azide (as specified on the Certificate of Analysis), pH 7.3.

Validation Data

Dot-blot analysis of different sorts of chemical compounds using Pseudouridine / 5-ribosyluracil Rabbit mAb (A20988) at 1:1000 dilution.
